Abstract of JP 2000050215 (A)

PROBLEM TO BE SOLVED: To provide only newest program guide information at all times, when requesting for presentation of program guide information from a viewer, **SOLUTION:** A CPU 16 of a television receiver 10 stores program guide information 161 in memory 16 with current date and time data measured by a clock circuit upon a program list display request and discriminates whether or not program guide information stored in a program list 161 is the newest information by comparing the date and time data stored in the program list 16 with current date and time data more than comparison data stored in an arithmetic RAM 16h, based on the comparison result. When the result of discrimination indicates that the program guide information is updated, the program guide information 161 in the program list data exclusive storage section 16d1 is displayed, and when the program guide information is information before updated, new program guide information is extracted from a received television signal and stored in the program list data exclusive storage section 16d1 and displayed.
